Product description

Trailer tow hitch with removable ball head. One distinguishing feature compared to competitor products is the trailer stability control: the car's DSC dynamic stability control, which comes as standard, takes account of the specific conditions of driving with a trailer and therefore increases safety. This is why the retrofit always entails coding of the control electronics by the dealer. It also means that when reverse gear is selected in trailer mode, any electronic parking assistant fitted is disabled. The trailer stability check, a system integrated into the DSC, is activated when the rear socket is occupied.

Sales features/benefits

- Low-cost alternative to the existing standard solution (SA3AC electric pivot-mounted trailer tow hitch).
- Theft-proof securing thanks to lockable ball head.
- Trailer tow hitch invisible when ball head removed.
- Can also be used for attachment of a bicycle carrier.
- Integrated trailer stability check.

Supplied package

- Mechanical trailer tow hitch
 - Set of electrical components
- The trailer module must be ordered separately. See EPC for details of the kit's contents.

Technical information

- Trailer loads of up to 1,200 kg
- Nose weight of up to 75 kg

Content / relevance

Please note that this product information is intended solely as prior information regarding new products.

Before ordering, always check the specified part numbers in the EPC. Only the EPC provides the information that should be taken as valid and current.

Trailer tow hitch with removable ball head SA235
