

Original BMW Accessories Snap-in adapter for Samsung mobile phones

NEWS:

- New product addition

Adaptation of product description

Get in, snap in, set off: with just one action, the range of personal communication & entertainment options installed on the mobile phone can be enjoyed in the car.

As well as charging the mobile phone quickly, the snap-in adapter also provides secure and stable stowage. The inductive coupling on the external aerial ensures the best possible network reception - even in areas with poor network coverage.

The BMW snap-in adapter is now available for selected Samsung models.

Sales features/benefits

- The snap-in adapter offers an **especially fast, optimised charging function**. If the mobile phone is inserted into the snap-in adapter, it is charged twice as fast compared to charging via the USB socket.
- Safely stowed: the snap-in adapter is a **safe and stable stowage system** for the mobile phone in the car.
- Good connections: the snap-in adapter connects the mobile phone to the car's external aerial, ensuring the **best possible network reception**, especially in areas with poor network coverage.
- The connection to the external aerial **reduces** the amount of **radiation** inside the car.
- Personal entertainment programme on board: the snap-in adapter comes with an integrated **USB interface**. Stored music can therefore be managed and played conveniently via the music player (depending on the equipment installed in the car). Playback is via the car's speaker system.
- The in-car display can show the **album cover of the track currently playing** (depending on the equipment installed in the car and its year of production). This enables songs to be instantly identified with their album or artist ("cover art").
- The **chrome-look** buttons give the snap-in adapter a high-quality appearance.

Functionality

To ensure the best possible sending and reception quality, the snap-in adapter features an integrated contactless connection (coupled antenna) with the external aerial.

Samsung Galaxy S2, S3, S3 mini, S4, S4 mini

Snap-in adapter for the Samsung Galaxy S3 (A0159923)

Technical information

Before ordering, always check the specified part numbers in the EPC. Only the EPC provides the information that should be taken as valid and current.

Complete price package

For a detailed tender preparation, find the complete price package on the KSD DVD.

Please refer to your price system or the latest price publications for the latest prices.

Snap-in adapter for Samsung mobile phones

Note

Please make the customer aware of the following points:

- The mobile phone must be unlocked before being inserted in the snap-in adapter. In some cars (depending on the equipment and year built), there is no other way of accessing the mobile phone.
- The latest information on Bluetooth compatibility, the scope of functions in the car and software updates can be found on the Internet at:
www.bmw.com/bluetooth. ◀

Note

- The snap-in adapter's entertainment function depends on the equipment in the car. Essential for the entertainment function is SA 6NF (music interface for the smartphone) or SA 6NS (convenience telephony with extended smartphone connection).
- Because of the size of the Galaxy phone models, the snap-in adapter is not suitable for every car. Multiple geometry versions are also available for the Galaxy S3 and S4. It is essential to observe the instructions in the EPC in order to prevent causing damage to the snap-in adapter, telephone or car.
- The ConnectedDrive reconfiguration means that a base plate is only installed in the car with the SA 6NS. This special equipment will be used from 03/2013 to 03/2014, depending on the car model.
- The "BMW Connected" App from BMW allows news, Wiki Local, diary entries and Facebook (further functions to follow) to be called up. This App is available free of charge from the Google Play Store. This App can only be used from production date 03/2013 onwards with the BMW ConnectedDrive SA 6NR "BMW Apps". For technical reasons, compatibility is only available for a number of smartphones to begin with.
- A summary of approved smartphones can be found in the description in the Google Play Store. ◀

Safety note

Mobile phones should not be exposed to extreme environmental conditions such as high temperatures (> 60°C). If a malfunction occurs, functions cannot be carried out using the mobile phone. Please note the mobile phone's instruction manual! ◀
