Compatibility tables: Digital road map DVDs/USB sticks for the BMW HDD navigation systems EUROPE

Updated:
 • February 2014

Product description

With this product information, we would like to provide you with a summary that enables you to assign the available updates for digital road maps quickly and easily to the matching BMW navigation systems.

The compatibility tables contain all available updates for the digital road maps with their associated part numbers. The aim of this is to make it easier to find the right part number for the digital road map updates, which depends on the head unit installed inside the car. The corresponding head unit can be definitively determined using the combination of the model, series, vehicle production date and installed special navigation equipment.

In order to make this summary as simple as possible, different compatibility tables have been created for ECE, USA and RoW.
